### DETAILED ACTION

#### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davis '359 in view of Decker '645. Jones discloses an apparatus for gathering materials (figures 1-4), the apparatus comprising two grasping elements (A,A') each which have shafts (F) with grasping means (B,B') at one end. Also, Jones shows the shafts being of 0.5 to 3 inches in diameter and two to six feet in length (as seen in figures 1-3) and the grasping means having tines (as best seen in figure 1). Further, Davis teaches that it is well known in the art to connect to implements (figures 1-3) with a relatively moveable coupling means (figure 4), the handles being turnable within the coupling means when moved to the non-square portions of the handles (as seen in figures 1-3) but fails to show the coupling means made of a flexible material. However, Decker clearly teaches that it is known in the art to provide a hinged coupling means between two handles of such an implement (figures 1-3) and to construct that coupling means from a flexible material (column 2, lines 27-40). It would have been obvious to one having ordinary skill in the art to provide the apparatus of Davis with the teachings of

Decker in order to provide a material gathering apparatus with a greater operational range.
